

1

Intersectional analysis to identify overlapping barriers for different stakeholder groups.

2

Evaluating whether various financing build resilience and scale low-carbon businesses.

3

Mapping the pathways through which green financing models enable women and youth to adopt clean technologies, innovate in green markets, and participate in value chains.

4

Assess coherence between national climate policies and practice; identify gaps such as institutional fragmentation or gender-blind regulations.

5

Thematic content analysis using MAXQDA

6

Showing how finance inputs drive women- and youth-led enterprise growth, boosting incomes and resilience, and supporting equitable low-carbon development.
